ANASTASIJA SELEVJORSTOVA

Portfolio: madebyasya.vercel.app | **AI & Automation Portfolio:** ai-portfolio-asya.vercel.app

✦ Full-Stack Developer with commercial experience in web development, AI integration, REST APIs and business applications. Hands-on experience integrating the Anthropic Claude API into a commercial platform, developing system integrations and working with complex business logic.

✦ Practical experience with Java, Spring Boot, PostgreSQL, Vue.js, React and TypeScript through full-stack projects. Experienced in building AI-powered applications and automation workflows using Spring AI, LLM APIs, n8n and external service integrations.

✦ Experienced in Agile/Scrum environments with Git-based workflows, code reviews and collaborative development. Actively using AI development tools such as Claude Code, Cursor and OpenAI Codex to support software development, testing and problem-solving.

✦ Combining a Bachelor's degree in Computer Science with technical development skills, a UX/UI background and experience working directly with end users. This helps me understand business requirements, analyse problems from different perspectives and turn practical ideas into reliable, user-focused solutions

EDUCATION

AI Full-Stack Developer - BCS koolitused — 2026

AI-Assisted Web Development - Aurora — 2026

Noorem-tarkvaraarendajast vanemarendajaks - TalTech — 2026

Online Course - IT School — 2023 - 2024
Front-End Developer / UI/UX Designer

Tallinn University, Institute of Digital Technologies — 2020 - 2023
Bachelor's degree, Computer Science

Tallinn Õismäe Russian Lyceum - gold medal — 2008 - 2020
Secondary Education

EXPERIENCE

Developer | GoERP Platform — 2024 - 2026
Erply Development OÜ

- Contributed to full-stack web application development for the GoERP business platform using JavaScript, Go Templates and SQL queries via QueryService.
- Introduced AI into the company's website builder: integrated the Anthropic Claude API (JavaScript/Go Templates) and built the prompt input and result preview UI, generating content for predefined template sections.
- Integrated REST API endpoints and connected front-end functionality with back-end services and business logic.
- Developed invoice integration flows via EstFeed, Docura and UnifiedPost, including XML parsing.
- Debugged and tested application functionality, resolving front-end and integration issues.
- Developed reusable front-end components and responsive user interfaces.
- Collaborated with developers and designers on application structure and technical solutions.

Front-End Developer (E-commerce Platforms) — 2024
Roller Äritarkvara OÜ

- Developed and maintained e-commerce websites using HTML, CSS, and JavaScript, following design team specifications and brand guidelines.
- Translated wireframes and UI designs into responsive, accessible user interfaces.
- Integrated APIs for dynamic features such as product listings, cart functionality, and order flows.

Internship | Web Master — 2022
Telia Eesti AS

- Built service pages from design prototypes using Telia's React component library and JSX, HTML, CSS, and JS (React, vanilla JavaScript).
- Managed website content via a headless CMS (WordPress) and contributed to front-end tasks in React and vanilla JavaScript.
- Acquired experience as a developer in a Scrum team (SAFe framework)

Sales consultant (call center) — 2021 - 2024
Telia Eesti AS

- Handled a broad range of customer inquiries as a primary point of contact, resolving technical and sales-related issues and mentoring new employees during onboarding.

HOBBIES

- TalTech cheerleader (dancing/cheering),
- Conferences/events
- Travelling (cruises)

LANGUAGE

Estonian	**C1**
English	**B2 (FCE)**
Russian	**Native**

SKILLS

Backend & Databases: Java, Spring Boot, Spring Data JPA/Hibernate, PostgreSQL, SQL, QueryService, REST APIs

Frontend: JavaScript, TypeScript, Vue.js, React, Next.js, Go Templates, HTML5, CSS/SCSS, Tailwind CSS

AI & LLM Integration: Anthropic Claude API (commercial), Gemini, Spring AI, OpenAI API, Prompt Engineering, Grounding, Structured JSON Outputs, LLM Evaluation, Prompt A/B Testing, Output Validation, Prompt Injection Mitigation

AI-Assisted Development: Claude Code, Cursor, OpenAI Codex, AI-assisted Code Review, Spec-Driven Development

APIs & Automation: n8n, REST APIs, Webhooks, Swagger/OpenAPI, Postman, JSON/XML Parsing, EstFeed, Docura, UnifiedPost, Adyen & Montonio APIs

Testing & Development Tools: Git, GitHub, Bitbucket, Docker, CI/CD, Jira, Confluence, JUnit, Unit & Integration Testing, E2E/Smoke Testing

Methods: Agile, Scrum, Kanban, Code Reviews, Debugging, Refactoring, SOLID/DRY, Web Security Basics (OWASP)

- Time management
- Teamwork & collaboration
- Problem-solving & critical thinking
- Responsibility & reliability
- Results-oriented
- Open-mindedness
- Solution-oriented mindset
- Willingness to learn new technologies
- Attention to detail & accuracy
- Stress resistance
- Flexibility & adaptability

PROJECT WORK

AI NUTRITION & WEEKLY MEAL PLANNER AI

Personal / BCS Koolitus | **Award from RingIT**

- Built an end-to-end Java 21 / Spring Boot / Vue 3 application that creates recipes and weekly menus from pantry data, tracks calories and generates missing-item shopping lists.
- Integrated Gemini via Spring AI and a swappable Claude implementation; used grounded prompts, typed structured responses, schema validation and Java-based calorie calculations.
- Added layered prompt-injection checks and prompt A/B tests with LLM-as-a-judge. The project received **an award from RingIT.**

Stack: Java 21, Spring Boot, Vue 3, PostgreSQL, Gemini, Spring AI, Claude API, LLM evaluation

AI CONTENT FACTORY - CAROUSEL GENERATION & PUBLISHING AI

Personal project: AI carousel generator with Telegram approval and one-click publishing.

- Built an n8n workflow that generates structured carousel scripts with the OpenAI API.
- Turned scripts into HTML/CSS slide templates rendered to PNG for review in Telegram.
- Webhook flow publishes approved posts to a Telegram channel; status kept in Data Tables.

Stack: n8n, OpenAI API, JavaScript, HTML/CSS, Telegram Bot API, Webhooks, n8n Data Tables

TELEGRAM LIFE ASSISTANT BOT AI

AI-Assisted Development | Serverless Automation

Serverless Telegram assistant for everyday planning, synced with Google Calendar.

- Built a serverless Telegram bot in TypeScript (grammY) on Cloudflare Workers via webhook.
- Integrated Google Calendar through custom REST calls and token handling inside Workers.
- Designed the Supabase PostgreSQL schema (14 SQL migrations); sessions survive restarts.
- Scheduled background jobs with pg_cron and pg_net, calling the Worker every 15 minutes.
- Wrote rule-based text parsing for a "Quick add" feature, with Europe/Tallinn time zone.
- Covered the code with 145 unit and 177 integration tests (node:test) on a real database.
- Kept each action within the free-tier limit of 50 outgoing requests per invocation.
- Developed the application using Claude Code as an AI-assisted development tool to support implementation, debugging, refactoring, and testing.

Stack: TypeScript, Node.js, grammY, Cloudflare Workers, Supabase (PostgreSQL), pg_cron, Google Calendar API, date-fns, node:test, ESLint

LIFTERTRANS - FULL-STACK TRANSPORT MANAGEMENT SYSTEM AI

Full-stack transport management system developed in a 3-person team (course project).

- Built backend functionality and REST API endpoints with Java, Spring Boot and PostgreSQL.
- Developed CRUD for jobs, drivers and customers with ADMIN / DRIVER role-based access.
- Built an AI Assistant that converts natural-language questions into SQL via an LLM API.
- Used structured JSON outputs so model responses are parsed reliably by the backend.
- Validated generated SQL and executed only read-only queries to protect the data.
- Integrated the Vue.js frontend, Spring Boot backend and PostgreSQL database.
- Documented and tested the API with Swagger/OpenAPI; worked with Git and Docker.

Stack: Java, Spring Boot, PostgreSQL, Hibernate, REST APIs, Vue.js, LLM API, Swagger/OpenAPI, Docker, Git

ACCOUNTING SYSTEM MODERNIZATION - VERP TO GoERP

Commercial Project | Erply Development OÜ

- Contributed to the modernization of a legacy accounting system within the GoERP/Erply environment.
- Developed functionality for the chart of accounts, journal entries, opening balances and account-balance views.
- Implemented search, filtering, pagination and data-entry interfaces for financial records.
- Worked with SQL queries, QueryService, dynamic data storage and Erply APIs to connect accounting interfaces with business data.

Stack: Go Templates, JavaScript, SQL, QueryService, KVS, Erply APIs, HTML/CSS

ELECTRICITY BILLING & E-INVOICE INTEGRATIONS

Commercial Project | Erply Development OÜ - riigihange

- Developed invoice-processing and integration flows within the GoERP platform.
- Implemented invoice retrieval, business-rule validation and XML e-invoice generation for EstFeed/Enefit integrations.
- Worked on automated invoice-processing workflows, including electricity seller identification and invoice grouping.
- Integrated external APIs and file-handling operations using JSON/XML, Base64, S3 and multipart requests.
- Troubleshot API payloads and invoice data-exchange issues.

Stack: Go Templates, JavaScript, SQL, Query API, Erply APIs, REST APIs, XML/JSON, EstFeed, Enefit, S3

PROJECT WORK

SCRAPING & PRODUCT AGGREGATION SYSTEM

Developed a clothing search platform that collects and aggregates product data from multiple Estonian e-commerce stores, enabling users to efficiently search, filter, and compare items.

- Built scraping logic using Java (Jsoup / Playwright) to extract and process structured product data.
- Designed and implemented REST APIs using Spring Boot.
- Stored and managed application data using PostgreSQL.
- Documented REST endpoints using Swagger/OpenAPI.
- Built React/Next.js frontend functionality for searching, filtering and categorising aggregated product data from multiple sources.
- Normalised inconsistent product data collected from multiple sources.

Stack: Java, Spring Boot, PostgreSQL, REST APIs, Swagger/OpenAPI, Jsoup, Playwright, React, Next.js, Tailwind CSS

FULL-STACK E-COMMERCE APPLICATION

Backend-focused e-commerce application for managing products, customers, orders and delivery options.

- Designed a layered backend architecture using Controller -> Service -> Repository.
- Developed REST API endpoints with Java and Spring Boot.
- Implemented product and order management, including order creation with multiple products and quantities.
- Used DTOs for transferring request and response data between application layers.
- Persisted and managed application data using Spring Data JPA/Hibernate and PostgreSQL.
- Integrated external delivery services to retrieve parcel terminal data.
- Worked with authentication and protected API endpoints.
- Used Swagger/OpenAPI and Postman to document and test REST endpoints.
- Handled JSON request/response data and integration with external APIs.

Stack: Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, REST APIs, Swagger/OpenAPI, JSON, Postman

BOOKING FERRY SYSTEM - TUULE LIINID

Web application for selecting and booking ferry travel based on date and available departure times.

- Developed reusable UI components using React and TypeScript for a ferry booking flow.
- Implemented date and departure-time selection and handled user input and form validation.
- Integrated frontend features with REST APIs.
- Collaborated in a Scrum team through task estimation, code reviews and Git/Bitbucket workflows.

Stack: React, TypeScript, REST APIs, Node.js, PenPot, Bitbucket

E-COMMERCE PLATFORM - CUSTOM FURNITURE SALES WEBSITE

Built a custom e-commerce platform for a modular furniture company, where each product is assembled from multiple components (e.g. tabletops, legs, screws). The platform supports dynamic stock validation, matrix product variations, flexible pricing, and checkout logic, tailored for both customers and internal logistics.

- Developed a feature-rich, responsive e-commerce platform for customizable modular furniture, where each product (e.g. a table) is assembled from individual components.
- Implemented stock logic validation, allowing real-time product availability display (In Stock / On Order / Pending) based on inventory of required parts (legs, plates, screws, fasteners).
- Built a complex Matrix Product System, supporting configurable variations (color, material, size), each with individual pricing, stock, and delivery data.
- Created multi-step checkout flow with dynamic delivery options (courier / self-pickup), VAT toggle, and Adyen payment integration.
- Created delivery time logic that dynamically adjusts based on stock levels and quantity added to cart - showing estimated lead time or fallback messages if stock is insufficient.
- Designed category pages, including filters (availability, brand, price) and sorting.
- Implemented file download system (PDFs for finishes, technical specs), breadcrumb navigation, and VAT display logic.
- Developed and designed confirmation flows with dynamic email notifications for clients and internal team, including full order summaries, delivery data, and optional installation services.
- Followed WCAG accessibility standards to ensure inclusive and user-friendly interfaces.
- Improved page speed and responsiveness for smooth UX across devices.
- Added Google Analytics tracking for user behavior and conversion flow.

Stack: HTML, CSS, JavaScript, Go Templates, Figma, Adyen API, Montonio API, Google Analytics

BCS KOOLITUS - AI-ASSISTED TRAINING MANAGEMENT PLATFORM

Participating in the AI-assisted development of a web-based training management platform.

- Analysed requirements based on client documentation and interactive mockups.
- Worked on database modelling and user-role definition.
- Communicated with the client and prioritised requirements.
- Followed an Agile/Scrum workflow using Jira and Confluence.
- Used Claude Code for AI-assisted technical planning and specification-driven development practices.

Planned stack: Java, Spring Boot, PostgreSQL, Flyway, Spring Security, JWT, Vue 3, TypeScript, Pinia, Tailwind CSS, Spring AI, Docker

PROJECT WORK

LABOULANGERIE - E-COMMERCE WEBSITE FOR PRODUCT SALES

LaBoulangerie is a responsive e-commerce website for a bakery, allowing users to browse products, view detailed descriptions, manage a shopping cart, and complete purchases through integrated online payment. The project emphasizes reusable components, a smooth checkout experience, and real-time order confirmation.

- Developed a multi-page online bakery store featuring a reusable product card component on the homepage.
- Built dynamic product detail pages with a shared reusable layout, including image carousel, descriptions, and "Add to Cart" logic.
- Implemented shopping cart functionality: users can add, remove, and update product quantities.
- Built a full checkout process with form validation and customer data collection.
- Integrated Montonio payment API for secure transactions.
- Enabled an email confirmation system (kinnituskirjad) to send order details to both the customer and admin.

Stack: HTML, CSS, Golang, JavaScript, Figma, Montonio API

PROMOTIONAL WEBSITE FOR POS SOLUTIONS

Multi-page promotional website for POS systems with a demo account form and guided POS onboarding flow, including demo access, local installation, system checks, and permission setup.

- Developed an adaptive multi-page promotional website for showcasing various POS (Point-of-Sale) solutions.
- Implemented a user-facing demo request form that allows visitors to create a test account and try out the POS interface and functionality on their own devices in a local environment.
- Created and developed a step-by-step POS setup guide to walk users through the full installation and configuration of the system.
- Handled legacy code and configurations.

Designed and developed a flow that allows users to:

- Create a demo account with credentials.
- Test the POS app locally on their own device.
- Automatically check system requirements and assign appropriate permissions needed to run the POS successfully.
- Follow a structured setup process with clear UI steps.
- Focused on clean UI, clear instructions, and accessibility across devices.

Stack: HTML, CSS, Golang, JavaScript, Figma, REST APIs, Google Analytics

TELIA INTERNAL SERVICE PLATFORM - UX AUDIT & REDESIGN

Bachelor's Thesis | Tallinn University

- Conducted a UX audit of Telia's internal customer service platform, analysing employee workflows, usability issues and business requirements.
- Evaluated user feedback, mapped workflows and developed interface improvement proposals for customer search, contact management and service processes.
- Validated proposed solutions using Nielsen's usability heuristics and employee feedback.

Skills: Requirements Analysis, UX Research, User Flows, Usability Testing, Figma, Prototyping, Business Process Improvement

ABACUS KIDS - CLIENT WEBSITE

Responsive website developed for a real client to showcase an educational invention.

- Led an Agile development team, participating in stand-ups and code reviews.
- Developed interactive UI components, including a 3D Flip Box and testimonial carousel.
- Implemented contact forms and messenger integration for customer inquiries.

Stack: HTML, CSS, JavaScript, PHP, Figma
https://asyase.github.io/abacuskids/

FLASHCARDS - VOCABULARY LEARNING APP

Interactive React application for learning English vocabulary with Estonian translations.

- Developed dictionary and flashcard training functionality.
- Implemented features for adding, editing and removing vocabulary entries.
- Built reusable React components for flashcards, navigation and user interactions.

Stack: React, JavaScript, HTML5, CSS3, SCSS
https://asyase.github.io/vocabulary_flashcards/

UX/UI DESIGN PROJECTS

Telia TV content discovery redesign, DailyTrack web app. Skills: user research, prototyping, Figma

ADDITIONAL PROJECTS

Events Calendar (React), Transfer Company & Vet Clinic sites (jQuery, Bootstrap), Book E-Shop (JS). More: github.com/asyase
